

Muhammad-Abdullah Abdelqader

Beaverton, Oregon | 602-600-7233 | abdullahga2006@gmail.com | [My Portfolio](#)

SKILLS

- Strategic thinking • Team engagement • Teamwork and collaboration • Time management • Python & C • Problem Solving • Team leadership • Partnership building • Multitasking Abilities • Microsoft Excel • PCB/Breadboard Troubleshooting • KiCad • MultiSim • LTspice • OnShape • Revit •

EDUCATION

Portland State University

Expected June 2028

Bachelor of Science, Electrical Engineering

Portland, Oregon

- GPA - 3.1
- Relevant Courses - Exploring Electrical Engineering, Engineering Computation, Engineering Programing, Digital Circuits, Digital Systems, Introduction to Design Processes, Electric Circuit Analysis I, Electric Circuit Analysis II, Electric Circuit Analysis III, Physics-I, Physics-II, Physics-III.

EXPERIENCE

Construction Associate & Lot Associate

April 2026 -Present

Home Depot

Tigard, Oregon

- Collaborated with colleagues to achieve daily sales goals through effective communication.
- Assisted Customers with project needs
- Participated in training sessions to develop knowledge of products and customer service techniques.

Member

September 2025 - Present

Viking Motor Sports

Portland, Oregon

- Participated in Viking Motorsports' Baja SAE engineering team meetings.
- Contributed to design discussions and project planning.
- Collaborated with team members to understand vehicle systems, design requirements, and the engineering development process.

PROJECTS

Desktop AI Assistant- ESP-32 s3, KiCad, OnShape

In Progress

- Collaborating with a joint team to develop an AI-Powered desktop lamp assistant
- Integrating movable arm, wifi capabilities, incorporating AI, microcontroller, microphones, speakers, and camera to directly interact with the user.
- Designing and testing hardware interfaces for reliable sensor communication and data acquisition
- Strengthening skills in embedded systems, PCB design, and sensor interfacing

Hamming Code Circuit- Multisim, Bread Boarding

Completed

- Designed and built a (7,4) Hamming code circuit on a breadboard with a partner using logic gate ICs, LEDs, and toggle switches
- Implemented encoding and parity-check logic to detect and correct single-bit errors to ensure code integrity
- Tested circuit functionality using manual inputs and LED-based visualization for error detection and correction
- Applied principles of digital logic design, Boolean algebra, and hardware troubleshooting

Mini-Piano Keyboard- Arduino IDE

Completed

- Collaborated with a team to design and build a mini piano keyboard using a microcontroller, buttons, speaker, and touch slider for tone control developing teamwork and communication skills
- Applied the Scrum methodology to plan tasks, track progress, and improve team coordination
- Developed skills in embedded systems, basic firmware integration, and hardware debugging
- Gained experience in PCB design and system-level integration through iterative development

Effects Pedal- STM32, OnShape

Completed

- Collaborated with a team to design and build an analog/digital audio effects pedal for electric instruments
- Learned Onshape and created the pedal's 3D enclosure and mechanical design, including component placement and physical layout
- Designed and iterated enclosure features to accommodate the PCB, controls, switches, and external connectors
- Assisted with hardware integration, testing, and troubleshooting to improve circuit performance and audio quality
